

Problem Statement: Build an Automated Lead Management & Email Tracking System

Objective

Build a system where a user can submit their details through a form, the data gets stored, a personalized email is sent automatically, and email engagement is tracked through a dashboard.

Required Features

1

Lead Capture Form

Create a form that collects:

- Full Name
- Email Address
- Phone Number
- Company Name (optional)
- Requirement / Message

2

Database Storage

Database Storage

Store the information entered by the user in a database.

The database should contain only user-submitted data.

Example:

Field	Example
Name	Rahul Sharma
Email	rahul@gmail.com
Phone	9876543210
Company	ABC Pvt Ltd
Requirement	Need AI automation
Submission Time	Timestamp

You may use any database solution:

Firestore

Supabase

MongoDB

SQL Databases

Any Other Solution

Automated Personalized Email

After form submission, automatically send an email to the user.

The email should:

- Use the user's name and requirement dynamically
- Contain a trackable link

Example:

Hi Rahul,

Thank you for reaching out.

We received your requirement: "Need AI automation"

Learn more: [Trackable Link]

Regards, Team

Email Open Tracking

Implement email open tracking.

Dashboard should show:

Total Emails Sent

Total Emails Opened

Open Rate %

Example:

100

Emails Sent

70

Opened

70%

Open Rate

Link Click Tracking

The link inside the email should be trackable.

When clicked:

- Store the click event
- Redirect the user to the actual link

Dashboard should show:

100

Total Emails Sent

30

Link Clicks

30%

Click Rate

Analytics Dashboard

Create a dashboard showing:

250

Total Leads

250

Emails Sent

160

Emails Opened

64%

Open Rate

45

Links Clicked

18%

Click Rate

Bonus (Optional)

Add an AI feature:

Example:

Analyze user requirements and classify leads:

Requirement

"I need a chatbot for my website"

AI Output

- **Category:** AI Automation
- **Priority:** High

Rules

- Any programming language/framework can be used
- AI tools are allowed
- APIs, libraries, and automation tools can be used
- Focus on working implementation and explaining your approach

Submission

Submit:

→ **Working demo link**

→ **Dashboard link**

→ **Source code (if available)**

→ **Short explanation of:**

- Technologies used
- Architecture
- How tracking works

📅 **Time Limit:** 45 minutes
